

# **10MW solar footprint**

## Overview

---

What is a 10 MW solar farm?

A 10 MW solar farm typically occupies a vast land area. The scale of a 10 MW solar farm varies depending on factors such as panel efficiency, location, and available sunlight; however, it generally spans 40 to 60 acres of land.

Why should you buy a 10MW solar power plant?

As you settle the entire cost of the 10MW solar power plant with your solar energy company, you become the owner of your solar plant and all the energy it generates. As a solar power owner, you benefit from the supply of free-of-cost, clean electricity for the next 25+ years.

What is a 10 MW solar power plant?

Imagine a vast area, typically the size of about 40 football fields, lined meticulously with rows of gleaming solar panels—this is what encompasses a 10 MW solar power plant. Such a facility is capable of producing enough electricity to power approximately 2,000 average homes, making it a significant contributor to local energy needs.

How much land does a 10 MW solar farm need?

A 10 MW solar farm typically requires a significant amount of land to ensure the proper functioning of the solar panels and to optimize the energy output. On average, a solar farm needs approximately 4 to 6 acres of land per MW, which means a 10 MW solar farm would require 40 to 60 acres.
