

ASEAN Pumping Station Energy Storage Power Station

Overview

How pumped storage and new energy storage are developing in central China?

The development of pumped storage and new energy storage in Central China shows a trend of coexistence and complementarity, which is mainly due to the great importance of energy structure optimization and power system regulation capacity in the region.

Who developed pumped storage power stations in China?

Hubei Energy Group Co., Ltd., Three Gorges Construction Group Before the 14th Five-Year Plan, the development of pumped storage power stations in China was mainly carried out by power grid enterprises, namely State Grid Corporation and China Southern Power Grid Corporation.

What is ASEAN Power Grid?

The Association of Southeast Asian Nations (ASEAN) Power Grid is a major initiative designed to connect the electricity networks of ASEAN's 10 member countries, enabling fully integrated grid operation by 2045. ADB is working with development partners to establish dedicated financing solutions for the initiative.

How many pumped storage power stations did China approve?

The country approved 110 pumped storage power stations with a total installed capacity of 148.901 gigawatts, which is 2.8 times the capacity approved during the “13th Five-Year Plan” period. China has completed 70.90 % of the total capacity target of 210 gigawatts for key implementation projects during the “14th Five-Year Plan”.
