

Albania solar container battery air transport power requirements

Overview

What are the regulations for shipping lithium batteries?

Specifically, the regulations for shipping lithium batteries include requirements for documentation. These regulations are designed to ensure the safe transport of lithium batteries, as they are considered dangerous goods due to their potential to ignite and cause fires.

When will lithium ion batteries be available for air transport?

From 1 January 2026, lithium-ion batteries that are packed with equipment and vehicles powered by lithium ion or sodium ion batteries must be offered for air transport with the battery at a reduced state of charge, unless otherwise approved by the relevant tates (A331).S.

What types of batteries can be transported by air?

You will encounter two main types when transporting lithium batteries by air: lithium ion batteries and lithium metal batteries. Lithium ion batteries, often used in consumer electronics like laptops and smartphones, are rechargeable and have a typical energy density of 160–270Wh/kg for NMC Lithium battery and 180–230Wh/kg for LCO Lithium battery.

What regulations apply to the transportation of batteries?

There are several regulations that apply to the transportation of these batteries, including IATA, Dangerous Goods Regulations, the International Maritime Dangerous Goods (IMDG) Code, and the DOT Hazardous Materials Regulations.
