

Azerbaijan Solar Drip Irrigation System Project

Overview

What is a solar drip irrigation system?

The solar drip irrigation system is completely automatic and it is a smart irrigation controller the irrigation is controlled by the prevailing weather conditions rather than a program. You can also adjust the water usage by adjusting the control dripper.

How do I use a solar-direct irrigation system?

If you choose to operate a solar-direct system, use a solar tracker for more steady pressure und volume. Optionally a second pump can be applied for boosting water from a lower reservoir. Any low pressure (drip) irrigation system can be used with PV pumps with proper pump layout and effectuate the most efficient crop production.

Can a solar irrigation system be used with a PV pump?

Any low pressure (drip) irrigation system can be used with PV pumps with proper pump layout and effectuate the most efficient crop production. Solar drip irrigation systems are simple and straight forward. Once introduced and setup properly, they can be extended easily.

What is a PvP irrigation system?

Solar (photovoltaic) powered pump systems (PVP) use lifted water for low-pressure irrigation systems like drip irrigation. Modern irrigation systems use pressure to lift and distribute water in pipes or hoses directly to the roots of crops or plants by dripping or to planted areas by sprinkling or spraying.

Azerbaijan Solar Drip Irrigation System Project

How Solar-Powered Pumps Are Transforming Rural Irrigation in Azerbaijan

The World Bank estimates that expanding solar irrigation to 25% of Azerbaijan's irrigated farmland could increase agricultural GDP by 8-12% while reducing the sector's ...
