Base station power supply aluminum block

Overview

What is an aluminum base station?

The Aluminum Base Station (ABS) is a series of modular high grade bases that screw together, and is the foundation for the RBS system. Each section measures right under 33" so with the full 3 bases that come standard, rod builders have a true 8' of workable area. If you need more than an 8 foot work area, simple add another base station segment.

What is a base station?

Base Stations or Base transceiver stations are a crucial part of the Telecom infrastructure that connects wireless devices to a central hub, accounting for a more significant amount of energy consumption in the Telecom industry.

What is a 3G base station converter?

In a 3G Base Station application, two converters are used to provide the +27V distribution bus voltage during normal conditions and power outages.

What is a low profile power supply?

Low profile power supply design usually includes printed circuit board (planar) power transformers and output inductors and surface mount input and output capacitors. Multiple output power supplies are often implemented with a multi-output flyback converter.

Base station power supply aluminum block

[AC and DC Integrated Power System](#)

Our company has developed an integrated design of distributed base station power supply system for a variety of installation environments such as corridor, shaft, and outdoor environment.
