

# Beijing Energy Storage Power

## Overview

---

What happened at an energy storage power station in Beijing?

Firefighters work in the accident site in an energy storage power station in Fengtai District of Beijing, capital of China, April 16, 2021. Two firefighters died when they were putting out a fire in an energy storage power station on Friday.

Will China develop new energy storage systems between 2025 and 2027?

BEIJING, Sept. 12 -- China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of new-type power systems.

Why is China moving to a new type of energy storage?

The move is part of China's broader push toward a green, low-carbon energy transition as well as high-quality economic and social development. It builds on significant growth in the sector. As of the end of 2024, the country's installed capacity of new-type energy storage had reached 73.76 million kilowatts, according to official data.

How big is China's energy storage capacity in 2024?

Bian Guangqi, deputy director-general of the NEA's energy saving and technology equipment department, said that by the end of 2024, total installed capacity of new energy storage projects in China reached 73.76 million kW, which represented an increase of over 130 percent compared to the end of 2023.
