

Box-type substation with solar container energy storage system

Overview

What is a containerized solar substation?

Containerised solar substation are designed for clustered solar parks where space and safety is a concern, and are of capacity 500KW to 20MW projects. Containerized substation is divided in three section or compartment— MV Breaker, Transformer and Inverters with DCDB.

What is a solar substation?

The purpose of the substation is to collect all solar array power and feed into the grid after stepping up voltage to distribution level. This substation is based on an Arcadia design, modified for the project. Power flow is bottom to top, 34.5 kV bus to 115 kV bus. It will consist of the following major drawings (single-line drawings).

What is a containerized mobile substation?

Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas of high pollution, and humidity. Customers requiring shorter overall delivery times and minimal on-site work have been the main drivers for Hitachi Energy's development of pre-fabricated indoor substations.

What is a solar grid substation?

Solar Grid Substation - outdoor switching stations to connect a full solar park to the grid, manufactured in sheet metal housing consist of medium voltage switchgear (gas insulated - GIS or air insulated - AIS type) per client's requirements fully equipped with all protection relays, measurements, monitoring and control systems.
