

# Broken glass on solar double glass

## Overview

---

Is solar glass breakage a problem?

module glass breakage has long been an observed failure mode in fielded solar projects. In recent years, however, the nature and causes of solar glass fracture have changed in alarming and unsustainable ways. Given the scale of the global market, increasing solar glass failure rates have the potential to become.

Are solar modules Breaking Glass?

The pv magazine editorial team includes specialists in equipment supply, manufacturing, policy, markets, balance of systems, and EPC. Solar modules are getting bigger, thinner, and more powerful. But from Texas to Thailand, the same problem is appearing: broken glass.

Can glass break a PV module?

Studies have found that contact between glass and frames is linked to spontaneous breakage in some PV modules. A recommended solution is using rubbery silicone spacers which maintain separation between the glass and the frame. Many modules already use silicone gaskets, but some designs leave gaps where the glass directly touches the metal frame.

What causes glass breakages in solar panels?

From pv magazine 6/25 Clean Energy Associates has investigated glass breakages at utility-scale solar sites across three continents. It has found that there isn't a single root cause, but a perfect storm: thinner glass combined with design shortcuts, evolving materials, and field realities that stress modules beyond what was simulated in the lab.
