

# Can solar glass be delivered

## Overview

---

Could solar glass be the future of energy storage?

**Solar Glass with Integrated Energy Storage:** Imagine a future where the glass itself not only generates solar energy but also stores it. Researchers are developing solar glass that integrates energy storage capabilities, enabling buildings and structures to store solar energy during the day for use at night.

What is solar glass?

Solar glass refers to glass panels designed to serve as a medium for photovoltaic (PV) systems. Unlike regular glass, which primarily functions as a protective and decorative surface, solar glass is engineered to allow light to pass through and interact with embedded photovoltaic cells.

What is photovoltaic smart glass?

Photovoltaic glass, also known as solar glass or transparent solar panels, is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

Can glass be used as a solar cell?

The cells can be integrated directly into the glass sheets, or glass can be used as the protective cover for pre-manufactured solar panels. In more advanced versions, the glass itself can be embedded with transparent conductive layers that enable it to function as a solar cell.
