

# **Can the batteries in the battery cabinet be used directly**

## Overview

---

Can batteries be installed in a room?

If the room has controlled access (i.e., accessible only by trained and authorized personnel), the batteries can be installed in open racks; otherwise the batteries should be in cabinets with lockable doors. Rooms and cabinets should be designed to prevent the accumulation of hydrogen as described below.

Do lithium ion batteries need a battery room?

Lithium-ion batteries need a battery room if their capacity exceeds 20 kWh, according to fire codes. NFPA 855 outlines ventilation and safety requirements. Store batteries at a temperature of 59°F (15°C). Also, refer to NFPA 70E for further safety guidelines, and ensure proper exhaust ventilation for off-gas events.

Do I need a special battery room?

Valve regulated lead acid (VRLA) batteries and modular battery cartridges (MBC) do not require special battery rooms and are suitable for use in an office environment. Air changes designed for human occupancy normally exceed the requirements for VRLA and MBC ventilation.

Does a battery room need a ventilation system?

Ventilation systems must address health and safety as well as performance of the battery and other equipment in a room. Valve regulated lead acid (VRLA) batteries and modular battery cartridges (MBC) do not require special battery rooms and are suitable for use in an office environment.
