# Cook Islands integrated signal tower base station solar

## Overview

---

What is the future of power in the Cook Islands?

Now with full-time power, the future has taken a new shape for Cook Islands' residents thanks to government renewable energy – leading to an improved quality of life, and increased economy activity. The improved livelihood in the communities that now have the benefit of reliable, 24-hour power supply is immeasurable.

How did we help the Cook Islands Government achieve its aim?

We helped the government realise its aim. To support the Cook Islands Government, the New Zealand Government – through the Ministry of Foreign Affairs and Trade, installed mini-grid photo-voltaic power systems in a number of villages on six remote islands. We helped manage this logistically enjoyable project.

What does the GCF grant mean for the Cook Islands?

The GCF is providing a \$12-million grant to co-finance the project, which is part of the seven-year Pacific Islands Renewable Investment Program covering the Federated States of Micronesia, the Marshall Islands, Nauru, Papua New Guinea, Samoa, and Tonga. The grant will fund assistance to the Cook Islands in procuring and installing battery storage.

How did the island construction system work?

There were no sources of hard aggregate for concrete or reliable earthmoving equipment on the islands, so all materials, equipment and tools required for construction were supplied via a freighter. Using the latest equipment and smart metering, the systems can be supported remotely.
