

Design standards for grid-connected inverters for solar container communication stations

Overview

What are the inverter standards used in grid connected PV systems?

This paper discusses the inverter standards of PV systems that must be fulfilled by the inverter used in grid connected PV systems focusing on THD (<5%), DC current injection, Anti-islanding detection standards. It also discusses the various inverter topologies used in grid connected PV system and their converter topologies.

Do grid-connected PV systems need an inverter?

An inverter is a crucial component in grid-connected PV systems. This study focuses on inverter standards for grid-connected PV systems, as well as various inverter topologies for connecting PV panels to a three-phase or single-phase grid, as well as their benefits and drawbacks.

What is a grid connected PV system?

Inverters are the main component of grid connected PV systems. It is a power electronic converter which converts DC power from panels into AC power as compatible to grid. There are three main inverter topologies according to their architecture are central inverter, string/multi-string inverter and module integrated microinverter.

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.
