Earth leakage breaker factory in Canberra

Overview

How does an earth leakage circuit breaker work?

Our earth leakage circuit breaker is generally composed of a ZCT (Zero-phase-sequence Current Transformer) + Earth leakage relay + Circuit breaker. The ZCT detects earth leakage current, notifies the electronic circuit, and shuts off the circuit using an internal tripping device.

Can an earth leakage circuit breaker cause a fire?

A leakage current of 100 mA or more can cause a fire. An earth leakage circuit breaker detects earth leakage of approximately 15 to 30 mA, and immediately shuts off the circuit within 0.1 seconds, preventing an accident.

What are earth leakage relays?

Earth leakage relays detect ground faults and abnormal leakage currents. These protective measures ensure circuit integrity, prevent equipment failure, and enhance overall electrical system safety. Air Circuit Breakers (ACBs) serve as the primary protective devices in large switchboards or for directly powering significant equipment.

What is earth leakage?

The term “earth leakage” is associated with a residual current of small magnitude and is generally measured in the order of milli ampere (mA). Residual currents of higher magnitudes, measured in % of rated load current are commonly referred to as earth fault. Why are RCDs needed?
