

Eastern European Energy Storage solar container lithium battery Company

Overview

What is the largest battery energy storage system in Eastern Europe?

RAZLOG, Bulgaria-- (BUSINESS WIRE)--Stationary battery manufacturer Hithium has successfully deployed the largest battery energy storage system (BESS) project in Eastern Europe to date, with a capacity of 55MWh.

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

How does European energy use battery storage?

European Energy works actively to implement battery storage in our renewable energy projects. Our battery storage projects are primarily co-located, meaning a regular renewable energy park is combined with batteries on the same plot, sharing the same grid connection.

What are battery energy storage systems (Bess)?

Energy storage technologies are critical to this transition, enabling renewable energy sources to contribute a larger share of grid capacity. Battery Energy Storage Systems (BESS) are particularly versatile, with applications ranging from short-to-medium-term utility-scale grid support to commercial and industrial installations.
