

# **Energy storage on the generation side of Vientiane power grid**

## Overview

---

How can Lao PDR-generated electricity be exported to neighbouring countries?

Integration of the Electricity System To effectively supply Lao PDR-generated electricity domestically and for export to neighbouring countries without any surplus, the power system for domestic supply should be integrated and operated with dedicated transmission lines for export.

What is Lao PDR's power generation capacity?

Figure 3.2 shows Lao PDR's installed power generation capacity and available power generation capacity above 1 MW. Hydropower plants account for 94% of the installed capacity of power plants in the electricity system for domestic supply.

How is electricity sold in Lao PDR?

The business of selling electricity in Lao PDR is regulated by the Electricity Law, with one state-owned company – EDL – selling domestic electricity. EDL procures the electricity that it sells from IPPs and EDL-Gen, the domestic power producers.

Should the domestic grid be operated as an integrated unit?

The domestic grid and the transmission lines of the export-only power producers should be operated as an integrated unit, and the power producers should sell their electricity on the integrated power system.
