

GETON CONTAINERS

# Energy storage solar project installation

## Overview

---

Why should you install a residential energy storage system?

As the demand for renewable energy and self-sufficient power systems rises, residential energy storage system installation has become a key solution for homeowners seeking reliability, sustainability, and control over their energy usage.

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

What is a residential energy storage system?

A residential energy storage system (RESS) is a setup that stores electricity generated from renewable sources (typically solar) or drawn from the grid during off-peak hours. The stored energy can then be used when demand spikes, during power cuts, or at night when solar panels are inactive.

Where are the energy storage projects being built?

The energy storage projects will be located at three existing SCE power substations: 225 MW at Springvale Substation in Big Creek-Ventura, 200 MW at Hinson Substation in the Los Angeles Basin, and 112.5 MW at Etiwanda Substation in the Los Angeles Basin.
