

# **Energychain Energy Storage Project**

## Overview

---

What are the energy storage projects in North China?

Energy storage projects in North China are currently the most in China. Due to the geographical environment, the power grid in Northwest China cannot supply power to all regions. Provide electricity to the people of the region through off-grid distributed generation and energy storage systems.

Is energy storage in China's 5 year plan?

In 2016, energy storage was included in China's 13th Five-Year Plan national strategy top 100 projects. Energy storage has officially entered the national development plan for the first time and has been identified in the 100 major engineering projects which China plans to implement in the next five years .

How is energy storage developing in China?

However, China's energy storage is developing rapidly. The government requires that some new units must be equipped with energy storage systems. The concept of shared energy storage has been applied in China, which effectively promotes the development of energy storage. 4.3. Explore new models of energy storage development.

How blockchain is applied to shared energy storage transactions?

In order to ensure the fairness, security, timeliness and transparency of the electricity market, blockchain is applied to shared energy storage transactions. Blockchain is a new application model of computer technology with distributed data storage and encryption algorithm.
