

# Four-cell series battery BMS

## Overview

---

What is a 4s40a battery management system?

The 4S40A Battery Management System (BMS) is a crucial component designed for 4-cell lithium-ion battery packs. It is capable of handling up to 40 amps of current, ensuring the safe operation of the battery pack by monitoring and balancing the cells.

What is a battery management system (BMS)?

This circuit consists of a battery management system (BMS) connected to a series of 18650 Li-ion batteries arranged in a 4S configuration to provide a regulated output voltage. The BMS ensures safe charging and discharging of the batteries, while a connector provides a 5V output for external devices.

What is a 4S battery management and charging system?

This circuit is a battery management and charging system for a 4S Li-ion battery pack. It includes multiple 18650 Li-ion batteries connected to a 4S40A BMS for balancing and protection, a battery indicator for monitoring charge status, and an XL4016 module for voltage regulation. The system is designed to be charged via a 20V input from a charger.

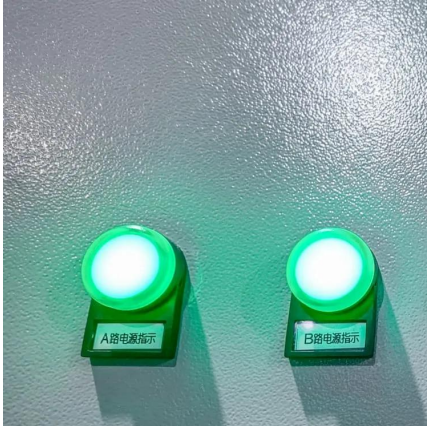

How many amps can a BMS handle?

It is capable of handling up to 40 amps of current, ensuring the safe operation of the battery pack by monitoring and balancing the cells. The BMS protects against overcharge, over-discharge, and short circuits, making it an essential component for maintaining the longevity and safety of lithium-ion batteries.

## Four-cell series battery BMS
