# Ground-mounted centralized solar project energy storage

## Overview

---

What is concentrated solar power (CSP) & thermal energy storage (TES)?

Concentrated solar power (CSP) is a promising technology to generate electricity from solar energy. Thermal energy storage (TES) is a crucial element in CSP plants for storing surplus heat from the solar field and utilizing it when needed.

How is solar energy stored in the TES?

The power generation from the PV and wind systems is recovered by an electric heating mechanism to warm the solar salt in the TES as soon as they start operating. The thermal energy from the CSP system and the electric heating device generated by the power rejection of the PV and wind systems are both stored in the TES.

Can thermal energy storage be used in solar power plants?

Thermal energy storage (TES) with phase change materials (PCM) in solar power plants (CSP). Concept and plant performance C.S. Turchi, M.J. Wagner, and C.F. Kutscher, “Water use in parabolic trough power plants: summary results from WorleyParsons’ analyses,” 2010. [Online].

What are the different types of energy storage systems?

The energy produced by the different renewable energy sources might be stored using a variety of energy storage systems, including; supercapacitors , fuel cells , Battery Energy Storage Systems (BESS) , thermal energy storage , compressed air systems and hydropower dams [29, 30].

## Ground-mounted centralized solar project energy storage

[large scale ground mounted battery energy storage systems](#)

...

The power will come from the Apollo solar project in Texas, which is expected to come online in June 2024. After completion, the project can produce 619,000MWh of clean energy per year.
