

Guatemala solar container communication station wind and solar hybrid lightning protection

Overview

How is lightning current injected in a hybrid wind-PV system?

The lightning current was injected at the AC, DC sides, and the transient values of current and voltage at the PV system, wind system, battery, load, and grid side were obtained at different lightning current waveforms. The lightning transients of the hybrid Wind-PV system were studied using PSCAD software .

Does LPs protect grid-connected PV systems from lightning strikes?

The performance of the LPS of grid-connected PV systems was evaluated with the focus on achieving the optimal design of LPS to protect the system from direct lightning strikes . Moreover, the surge potentials under the effect of separation distance, soil structure, and grounding systems were analyzed.

How to protect PV system in case of indirect lightning?

A proposed design of SPD to protect the PV system in case of indirect lightning was explained , where the designed hardware was type 2 SPD. This type consists of varistor, Zener diode, common mode choke, transient voltage suppresser (TVS), and gate discharge tube (GDT).

Guatemala solar container communication station wind and solar hy

[Wind power energy saving . Shanghai Warner Telecom Co., ...](#)

Wind and solar energy complementary working system well meet the power demand of the communication base station. The wind and solar hybrid integrated power supply system uses ...
