Heterojunction solar tiles

Overview

What is a silicon heterojunction (SHJ) solar cell?

The silicon heterojunction (SHJ) SCs shown tremendous results to get rid of the efficiency restrictions of the SCs developed by homojunction methods and thus further pushed silicon solar cell efficiency to its maximum theoretical limits [, , ,].

What is heterojunction technology (HJT)?

Heterojunction Technology (HJT) is a hybrid solar cell structure that combines crystalline silicon (c-Si) with amorphous silicon (a-Si) layers.

What are HJT solar cells made of?

Heterojunction Technology (HJT) solar cells are composed of a layered structure that combines crystalline and amorphous silicon. This structure enables HJT cells to leverage the best of both silicon types, resulting in high efficiency and better surface passivation with lower recombination losses.

Is HJT the next-generation solar cell technology?

Over the past three decades, it has consistently achieved record-breaking photovoltaic efficiencies. With a maximum cell efficiency of 29.20%, closely approaching the 29.40% of monocrystalline silicon cells, HJT is widely regarded as the next-generation solar cell technology.
