

# High power inverter pure sine wave

## Overview

---

What is a pure sine wave inverter?

A pure sine wave inverter turns the direct current (DC) from your solar panels or batteries into the alternating current (AC) that powers your home. Unlike modified sine wave inverters, which produce a rough approximation of AC power, pure sine wave inverters generate a smooth, clean output that closely resembles the power you get from the grid.

How much does a sine wave inverter cost?

\$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat. \$500 and above: This kind of money will get you a heavy-duty inverter with a power capacity from 3,000 to 12,000 watts.

Why do you need a sine wave inverter?

The clean power produced by pure sine wave inverters reduces electrical component stress on your devices. Compressors, motors, and power supplies will experience lower wear and tear and ultimately prolong the life of your appliances and electronics. The long-term benefit most often outweighs the higher initial cost of the inverter. 6.

What is a modified sine wave inverter?

Contrary to pure sine wave inverters, modified sine wave inverters only attempt to mimic a sine wave, which can result in regular and bad disruptions to the grid and to your experience. On the other hand, pure sine wave inverters actually produce sine waves, which minimise disruptions, and maximise efficiency.
