

# **How effective is the rain protection of rooftop solar panels**

## Overview

---

Do solar panels work in the rain?

Yes, solar panels do work in the rain—just not at their full potential. Rainy or cloudy weather reduces the amount of sunlight hitting your solar panels. This, in turn, affects the energy output. On rainy days, solar panels typically produce 10% to 25% of their normal capacity.

Can solar panels withstand rain?

Most solar panels are designed to withstand rain and other weather conditions, but it is still important to take steps to protect them. Solar panels can be damaged by heavy rains or hail, so it is important to have a plan in place to protect them. There are a few different ways that you can protect your solar panels from rain damage.

Can solar panels work in a cloudy or rainy climate?

There are numerous examples of solar installations in cloudy or rainy climates that are successfully meeting energy needs. To give you a clearer picture, on a cloudy day, a solar panel might operate at around 10-25% of its maximum efficiency. However, this doesn't mean that they stop contributing to your energy needs.

Do solar panels need to be waterproof?

Solar panels need to be waterproof because they are constantly exposed to the elements. Water can damage the electrical components of the solar panel and cause it to malfunction. As the weather gets colder, it's important to think about how you can protect your solar panels from the elements.
