

# **How much does a 5 kW solar panel cost**

## Overview

---

How much does a 5 kW solar system cost?

For a fully installed 5 kW Solar System in 2025, typical cost lands near \$2.50-\$3.50 per watt, or \$12,500-\$17,500 before incentives.

Should you buy a 5kw or 10kW Solar System?

Given rising electricity costs, the 5kW solar system price with subsidy in both countries offers a smart long-term investment for households. A 10kW solar system is ideal for larger homes, multi-storey bungalows, and even small businesses such as clinics, retail stores, and guest houses.

How much does a 100kW Solar System cost?

In the U.S., a 100kW solar system costs approximately \$100,000 to \$150,000. After applying the 30% federal solar investment tax credit (ITC), the net cost drops to \$70,000-\$105,000. Businesses may also benefit from MACRS (Modified Accelerated Cost Recovery System), which further improves ROI.

Can a 5kw Solar System be used with a battery?

If you pair your 5kW solar arrangement with a battery, you can store any excess power for later use. So, you will make significant savings if your energy consumption is moderate or less than average. However, a 5kW solar system might not be sufficient for a household with high energy consumption.
