# How much does solar panels cost per kilowatt-hour

## Overview

---

How much do solar panels cost?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

How much does solar energy cost per kWh?

Cost per kWh shows the lifetime cost of solar electricity by dividing your net system cost by total expected energy production over 25 years. This typically ranges from 6-8 cents per kWh, compared to current grid electricity averaging 16.44 cents per kWh nationally.

What is a kilowatt hour?

The kilowatt hour is a unique unit of measurement that trips up many people trying to understand the cost of their solar panel system or how much energy their solar panels produce. We hope we gave you enough information to better understand any proposals you receive for home solar.

How many kilowatts does a solar system use?

Solar systems are sized in kilowatts (kW) and are typically designed to offset 100% of your average annual electricity usage. For reference, the average U.S. household consumes 10,000 kWh of electricity per year and, with average sunshine, would need a 7.5 kW solar system to offset their electricity charges.

Is the price of solar panels falling?

## How much does solar panels cost per kilowatt-hour

### [How much does a solar photovoltaic panel cost per kilowatt hour?](#)

The cost of solar photovoltaic panels per kilowatt hour can vary significantly based on several factors, including geographical location, market conditions, installation method, and ...
