

# How much electricity can a household battery store

## Overview

---

How much power does a home battery have?

Some batteries offer just 3–5 kW of power—enough for lights, a fridge, and a few other essentials. Quality home battery systems are modular, which means that you can scale both energy storage capacity and output power based on your needs.

How much electricity does a home storage battery use a day?

On average, this works out at just under 5kWh per day. Mark has neither the financial nor practical means to install renewable technology. However, he can use a home storage battery to take advantage of cheaper off-peak electricity rates, perhaps with the likes of the Octopus Flux tariff. Due to its compact size, Mark opts for the Giv-Bat 2.6kWh.

What is the capacity of a home battery?

The capacity of a home battery is expressed in kilowatt hours (kWh). This represents the amount of power the battery can store. For example, if you use a 1.000 watt (1 kW) device and let it run for one hour, you have used 1 kWh. Please note: some manufacturers state the gross capacity, while in practice you can only use the net capacity.

Should you put battery storage in your home?

In short, battery storage in your home can bring the following benefits: Let's say your home has solar panels on the roof or even a wind turbine in the back garden. Without battery storage, a lot of the energy you generate will go to waste.
