

# Large battery plus inverter

## Overview

---

What is a battery inverter?

A battery inverter, also known as a DC to AC inverter, converts the direct current (DC) stored in a battery into alternating current (AC), which is the type of current typically used in homes, businesses and industry. Battery inverters are therefore essential for making use of stored solar power.

Why is a battery inverter important?

A battery inverter is essential in order to use the energy put into temporary storage in the battery or to feed energy into the utility grid because the energy in the battery exists in the form of direct current (DC). Yet, the utility grid and most consumers (electrical appliances, electrical machines) use alternating current (AC).

Can a battery inverter be used in a single-phase PV system?

A single-phase battery inverter is only suited to small PV systems in single-family homes. This variant is only permitted for PV systems of up to 4.6 kilovolt-amperes (kVA). Three-phase battery inverters are mandatory for larger systems in excess of 4.6 kVA.

Can a battery inverter be used with a SMA home storage?

For a high-capacity setup a battery inverter 3000W might be needed. The SMA Home Storage can be configured to power output of 3.2 kWh to 16.4 kWh and is the right solution for all three variants. Why can't you use a battery inverter in a system without a PV inverter?

The PV inverter and battery inverter in a PV system work together.
