Latest investment in solar cells and modules

Overview

How big is the solar cells and module market?

The overall market size for the solar cells and module market was USD 191,647.5 Million in 2025. How big is the solar cells and module market expected to be in 2035?

The solar cells and module market is expected to reach USD 402,402.1 Million in 2035. What will drive the demand for the solar cells and module market during the forecast period?

Are solar cells a good investment?

Despite hurdles, the solar cells and module market shows big growth chances. Growth of bifacial solar panels, which can catch sunlight from both sides for more power, makes them work better and cheaper. Perovskite solar cells also see growth. They offer better conversion efficiency and flexibility.

Will a'relentless' investment in the solar PV supply chain continue in 2025?

Despite ongoing manufacturing overcapacity, CEF described a "relentless" investment in the solar PV supply chain, driving a 29% year-on-year manufacturing capacity increase in China in 2024. This is a trend that CEF expects to continue in 2025, which may stabilise some of the record low module prices seen in the industry.

Will solar PV module prices decline in 2025?

These innovations are expected to contribute to a steady decline in solar pv module prices. According to recent market analyses, the average price of solar PV modules dropped by nearly 10% in 2023 alone, with projections indicating further decreases in 2025 due to increased production capacity and technological advances.
