

Latest prices for independent energy storage

Overview

How much does energy storage cost?

Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power. It also helps them handle money risks. As prices drop and technology gets better, people need to know what causes these changes.

How much does energy storage cost in 2025?

In 2025, they are about \$200-\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power. It also helps them handle money risks.

How much does battery storage cost in 2025?

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200-\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power.

How much energy storage is installed in the UK?

Total installed capacity of utility-scale storage is now approaching 1.7 GW across 127 sites and the figure below shows annual installed energy storage capacity by project size. The UK installed 446 MW of utility-scale energy storage in 2021, close to the previous high seen back in 2018. Image: Solar Media Market Research.
