

# **Liechtenstein EKa grade cylindrical lithium iron phosphate battery**

## Overview

---

What are the different types of lithium phosphate batteries?

1. Cylindrical LiFePO<sub>4</sub> Cells Cylindrical LiFePO<sub>4</sub> cells are the most commonly used type of lithium iron phosphate batteries. They resemble the shape of traditional AA or AAA batteries and are widely employed in applications where high power and durability are essential.

What are lithium iron phosphate (LiFePO<sub>4</sub>) batteries?

Lithium iron phosphate (LiFePO<sub>4</sub>) batteries are known for their high safety, long cycle life, and excellent thermal stability. They come in three main cell types: cylindrical, prismatic, and pouch. Each of these types has distinct characteristics that make them suitable for various applications.

What is a cylindrical lithium ion battery?

Cylindrical cells one of the most widely used lithium ion battery shapes due to ease to use and good mechanical stability. The tubular cylindrical shape can withstand high internal pressures without collapsing. Melasta produces multiple sizes and capacities according to the customer requirement.

Are lithium ion batteries based on graphite based anodes or cathodes?

Currently, lithium-ion batteries with lithium iron phosphate-based cathodes and graphite-based anodes are widely utilized in power battery applications [31, 32]. Figure 3. Schematic structure of lithium iron phosphate .
