

Liechtenstein vanadium battery energy storage

Overview

What is a vanadium ion battery?

With the aim to address these challenges, we herein present the vanadium ion battery (VIB), an advanced energy storage technology tailored to meet the stringent demands of large-scale ESS applications. The VIB is based on an advanced electrochemical framework integrating all-vanadium chemistry with a streamlined cell architecture.

What is a aqueous vanadium ion battery (VIB)?

First real-world demonstration of aqueous vanadium ion battery (VIB).
Maintains over 99 % of initial capacity over 12,000 cycles at 20 C-rate.
Achieved 98.1 % round-trip energy efficiency at 1 C-rate. Enables safe and reversible full discharge to 0 V without degradation.

What are vanadium redox flow batteries (VRFBs)?

Vanadium redox flow batteries (VRFBs), widely researched as an alternative for large-scale applications, provide a number of benefits including safety and long cycle life.

Are lithium-ion batteries suitable for mobile applications?

For instance, lithium-ion batteries (LIBs), despite showing high applicability in mobile applications due to their high energy density and portability, face significant challenges in grid-scale use including safety concerns and complex thermal management, making them less viable for large-scale, stationary systems [1, 2, 3, 4].
