

GETON CONTAINERS

North Africa Double Glass solar Curtain Wall Customization Company

Overview

What is a curtain wall system?

Curtain wall systems are typically designed with extruded aluminium framing members, although the first curtain walls were made with steel frames. The aluminium frame is typically infilled with glass, which provides an architecturally pleasing building, as well as benefits such as daylighting.

Does Photovoltaic Glass fit in a curtain wall?

No, the BIPV photovoltaic glass structurally does not differ from other types of conventional glazing. Therefore, it is integrated into the building envelope (curtain wall, façade, or skylight) like any construction material. What solar control and comfort advantages does photovoltaic glass offer in a curtain wall?

What is a photovoltaic curtain wall?

They enhance thermal comfort and help prevent the greenhouse effect. A standard curtain wall offers no return on investment. In contrast, a photovoltaic curtain wall not only insulates the building but also generates power for over 30 years. This reduces monthly electricity bills and ultimately pays for itself over time.

How does a pressure glazed curtain wall work?

The glass is set in a recess in a frame; If any stops are used they are also recessed; so the glazing is flush with the frame jamb surface. On a pressure glazed curtain wall, the aluminium frame holding the glass is exposed, so you see the framing from the outside.
