

# Off-grid cost of energy storage containers used in US ports

## Overview

---

How much does a commercial battery energy storage system cost?

**Average Installed Cost per kWh in 2025** In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

Will the cost of energy storage decline in 2025?

For energy storage in 2025, Lazard said there have been notable declines in the levelized cost of storage (LCOS) of utility-scale and commercial and industrial (C&I) battery energy storage systems (BESS).

Does levelised cost of storage offset rising battery storage costs?

The levelised cost of storage (LCOS) for battery storage in the US has declined enough recently to offset increases between 2021 and 2024, according to Lazard. Investment bank and financial advisory Lazard has just published the 2025 edition of its annual levelised cost of energy (LCOE) analysis report.

Should you invest in a commercial battery energy storage system in 2025?

In 2025, investing in a high-quality ESS is not only affordable but essential for energy-forward businesses. Contact GSL Energy today to find the right storage solution for your business. Discover the true cost of commercial battery energy storage systems (ESS) in 2025.
