

Putting solar panels on the roof

Overview

Should you install solar panels on your roof?

Installing solar panels on your roof is not only good for the environment, but also beneficial for your wallet. In this blog post, we will outline the costs and yields of solar panels. The yields of solar panels depend on the number of panels and the power of the panels. The capacity of solar panels is expressed in Watt peak (Wp).

Should you choose solar during a roof replacement?

That isn't the only way you'll save by choosing solar during a roof replacement. Solar panels last about 25-30 years, which is similar to the lifetime of a roof. By doing both at the same time, you avoid needing to have your solar panels re-installed after replacing your roof, which can save money in the long-run.

Do roof-mounted solar panels need a new roof?

So, when a home with roof-mounted solar panels needs a new roof, the solar panels have to come down. Modern solar panels for homes and businesses are often guaranteed to produce energy efficiently for 25 to 30 years. In theory, that's not a major issue. If both are ready to be replaced at the same time, it might even be convenient.
