

Solar Cadmium Telluride solar Panels

Overview

What is a cadmium telluride solar cell?

Cadmium telluride solar cell, a photovoltaic device that produces electricity from light by using a thin film of cadmium telluride (CdTe). CdTe solar cells differ from crystalline silicon photovoltaic technologies in that they use a smaller amount of semiconductor—a thin film—to convert absorbed light energy into electrons.

What are the advantages of a cadmium telluride solar panel?

The major advantage of this technology is that the panels can be manufactured at lower costs than silicon-based solar panels. First Solar was the first manufacturer of Cadmium telluride panels to produce solar cells for less than \$1.00 per watt. Some experts believe it will be possible to get the solar cell costs down to around \$0.5 per watt.

How efficient is cadmium telluride?

Continued improvements in cadmium telluride technology are pushing closer to CdTe's theoretical efficiency of above 30%. Regarding costs, CdTe solar cells are generally cheaper to produce than silicon-based cells, with prices around \$0.46 per watt.

What is cadmium telluride (CdTe)?

The United States is the leader in cadmium telluride (CdTe) photovoltaic (PV) manufacturing, and NLR has been at the forefront of research and development in this area. PV solar cells based on CdTe represent the largest segment of commercial thin-film module production worldwide.
