

Solar lights are brightest at 100-200 watts

Overview

How many lumens does a solar light need?

Solar lights with 15-30 watts and 1000-3000 lumens provide enough light to cover larger areas while ensuring security and visibility. For Streets and Roadways: Street lighting requires even more brightness, with wattage ranging from 30-60 watts and lumen outputs between 3000 and 6000 lumens.

Should you choose a solar light with low lumens?

If you pick a solar light with low lumens, it might look pretty but won't light up your garden path. On the other hand, a solar light with high lumens will give you the brightness you need without wasting energy. With that in mind, let's uncover why watts, though familiar, no longer tell you the full brightness story.

Is a high wattage solar light fixture a good choice?

For example, a high-wattage solar lighting fixture that produces few lumens would be inefficient, as it consumes a lot of energy without providing much light. Conversely, a low-wattage fixture with a high lumen output is more efficient, providing bright light while conserving energy.

How many lumens does a solar street light need?

More lumens mean a brighter light. For example, pathway lights typically need 50-200 lumens, while solar street lights may require 2000-10,000 lumens depending on the application. When you think of solar lights, the first number that might catch your eye is "watts."
