Solar power generation system in Eastern Europe factory

Overview

Can European solar production underpin resilience?

A new market analysis from SolarPower Europe highlights the potential of European solar production to underpin the resilience of the European sector. SolarPower Europe has published a new report mapping Europe's solar PV module production equipment capacity.

Which European countries have the most solar energy?

The age of solar energy is dawning in Eastern Europe: According to the European industry association SolarPower Europe, Poland has been one of the top ten leading countries in Europe in terms of PV deployment since 2016. Hungary has joined the list after adding 1.6 gigawatts (GW) of PV capacity in 2023, a 45 percent increase over the previous year.

How many solar PV modules are made in Europe?

Today, at least 38 European solar PV module production equipment manufacturers operate on the continent, in nine countries (DE, FR, IT, NL, CH, ES, HU, FI, NO). Most - 75% - are active in the cells and modules equipment manufacturing segment.

What is the role of European companies in the solar industry?

In the solar sector, European companies originally played a key role in developing the production equipment needed for the mass production of solar wafers, cells, and modules. While the rise of China's solar manufacturing sector initially provided a significant export market, a highly competitive local industry has since emerged.
