

# **Solar power storage in China in Karachi**

## Overview

---

Why are low-price battery energy storage systems coming to Pakistan?

The combination of a glut of lithium, a key battery material, and overcapacity of lower-tier China-made batteries has created a flood of cut-price battery energy storage systems for lower-income countries such as Pakistan.

Are battery storage systems too expensive in Pakistan?

The battery storage systems are still too expensive to be adopted as widely as solar has been in Pakistan in the near future. But distributors say prices are falling rapidly and demand continues to grow.

Why are people switching off solar panels in Pakistan?

Households that can afford solar panels are switching off. Since 2015, Pakistan has drawn in billions of dollars' worth of sovereign-backed loans to finance new power plants and signed long-term liquefied natural gas deals with QatarEnergy and Italy's Eni.

Why are Chinese solar panels so expensive?

Chinese solar panel prices have plummeted in recent years as the cost of electricity from Pakistan's grid has surged, prompting the country of 240mn people to import solar panels with the capacity to generate about 19GW last year, according to Jenny Chase, BloombergNEF lead solar analyst.
