

Spanish solar container communication station supercapacitor project bidding

Overview

What is energy storage in Spain?

It targets large-scale energy storage projects in Spain. It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage. The program supports hybrid projects, which combine storage with renewable energy, such as solar or wind farms.

Will Spain create a capacity market for mainland electricity?

The Spanish ministry for ecological transition has launched a public consultation on a proposed ministerial order to create a capacity market for Spain's mainland electricity system. Image of Galp's solar power plant with rendering of Powin's new battery installation. Photo: Business Wire.

How will Spain increase its energy storage capacity?

Spain has launched an ambitious €700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems.

How would a capacity mechanism work in Spain?

Capacity mechanisms pay energy generation and storage site owners for having capacity available for deployment in times of grid need, as well as paying for the electricity provided. Any such system would complement Spain's active demand response service, which stimulates the demand side of the supply and demand equation to help keep the lights on.
