# Suzhou Energy Storage Project

## Overview

---

What happened at the Suzhou thermal power plant & molten salt energy storage project?

On March 15, the final steel beam was hoisted into place for the main plant building of the thermal power + molten salt energy storage project at the Suzhou Thermal Power Plant, operated by CHN Energy Anhui Branch.

Will Suzhou thermal power plant boost external heat supply capacity?

Once fully operational, the project will boost external heat supply capacity to 410 tons per hour—an increase of 260 tons per hour over previous levels. Suzhou Thermal Power Plant, a typical urban co-generation facility, operates two 350,000-kilowatt thermal power units that serve both electricity and heating needs.

What is the Suzhou project?

The project is a centre piece for the Governments headquarter campus and its core purpose is to represent Suzhou and assist in bringing new developers into the area and then control the quality through planning legislation and guidance.
