Tallinn solar module glass

Overview

What is a glass glass solar module?

Glass glass solar module is a long lasting and ultra resistant to any weather conditions Building Integrated Photovoltaics solution. BIPV solar panels can be used as an additional power source and alternative material in architecture to achieve future design for a comparable to standard materials price.

What is a PV glass module?

This technology so far has the highest durability rate against harsh environmental conditions and longer lifespan compared to other building integrated photovoltaics solutions in the market. These PV glass modules are not only a great and lightweight construction solution for energy efficient buildings.

Are PV glass modules a good solution for energy efficient buildings?

These PV glass modules are not only a great and lightweight construction solution for energy efficient buildings. It provides glazing design options and endless possibilities for BIPV designers and architects to implement one of a kind exterior solutions.

What is the difference between glass and plastic solar modules?

Glass/Glass modules withstand air and moisture and offer best cell protection, while plastic backsheets of glass/foil modules become porous. The Glass/Glass composite protects solar cells against micro cracks and thus ensures long-term operating life of 40 years and more.
