

Test items for container energy storage batteries

Overview

What testing systems are available in our battery labs?

Our Battery Labs have shock and vibration testing systems with a maximum force vector of 120 kN, mounting surfaces of 1.20 x 1.20 m and a maximum load of up to 1,000 kg. Shaker tests are also possible under thermal and climatic superposition with simultaneous loading/unloading.

What is a lithium-ion battery energy storage system?

1. Objective Lithium-ion battery (LIB) energy storage systems (ESS) are an essential component of a sustainable and resilient modern electrical grid. ESS allow for power stability during increasing strain on the grid and a global push toward an increased reliance on intermittent renewable energy sources.

What tests are conducted at the Offenbach battery test facility?

Below are some of the most sought-after tests conducted at our Offenbach battery test facility. The UN 38.3 transport test is a globally mandated safety standard for the transport of lithium batteries and lithium cells.

What is the maximum voltage a battery can test?

Our large battery test channels provide voltages up to 1,000 V at maximum powers of 540 kW. Our Battery Labs have shock and vibration testing systems with a maximum force vector of 120 kN, mounting surfaces of 1.20 x 1.20 m and a maximum load of up to 1,000 kg.
