Thin-film cadmium telluride solar glass

Overview

Can thin films of cadmium telluride be used in solar cells?

Thin films of cadmium telluride (CdTe) have attained the attention of researchers due to the potential application in solar cells. However, cost-effective fabrication of solar cells based on thin films along with remarkable efficiency and control over optical properties is still a challenging task.

What is cadmium telluride (CdTe) solar glass?

Among the emerging technologies, cadmium telluride (CdTe) solar glass stands out with its high efficiency, aesthetic appeal, and eco-friendly properties, making it a prominent solution for BIPV applications. 1.

What is cadmium telluride (CdTe)?

The United States is the leader in cadmium telluride (CdTe) photovoltaic (PV) manufacturing, and NLR has been at the forefront of research and development in this area. PV solar cells based on CdTe represent the largest segment of commercial thin-film module production worldwide.

What challenges does cadmium telluride face?

As the leading material in thin-film solar technology, cadmium telluride (CdTe) faces challenges from surface reflective losses across the solar spectrum and weak absorption in the near-infrared (NIR) range.
