

What does the uninterruptible power supply battery cabinet include

Overview

What does a battery cabinet power?

Battery cabinets are designed to hold batteries used to power an uninterruptible power supply (UPS) system. In the event of a power disruption or outage, the UPS system ensures that your devices continue to operate from the energy stored in the batteries in the battery cabinet.

What is a battery backup or uninterruptible power supply (UPS)?

A battery backup or uninterruptible power supply (UPS) is a device that provides battery power to a load when the input power source or mains power fails. UPSs come in different sizes with batteries that can power devices for up to several hours, depending on the model and how much power the device consumes.

How do uninterruptible power supplies work?

Uninterruptible power supplies (UPS) automatically test their batteries regularly, typically every 24 hours, by placing a load on the battery set and monitoring the discharge performance. This is how they work.

What is the battery capacity of the UPS system?

The UPS system uses batteries in the battery cabinet to provide power during disruptions. The battery capacity is 34.6 kWh. The system is lithium-ion based and can support up to 5 MW in parallel.
