# Wind power source in mobile base station

## Overview

---

Can solar and wind provide reliable power supply in remote areas?

Solar and wind are available freely and thus appears to be a promising technology to provide reliable power supply in the remote areas and telecom industry of Ethiopia. The project aim generate and provide cost effective electric power to meet the BTS electric load requirement.

Can a hybrid solar and wind power system provide reliable electric power?

This paper presents the solution to utilizing a hybrid of photovoltaic (PV) solar and wind power system with a backup battery bank to provide feasibility and reliable electric power for a specific remote mobile base station located at west arise, Oromia.

Do cellular mobile towers need a generator?

There is a clear challenge to provide reliable cellular mobile service at remote locations where a reliable power supply is not available. So, the existing Mobile towers or Base Transceiver Station (BTSs) uses a conventional diesel generator with backup battery banks.

How is wind speed extracted from NASA?

So, wind speed extracted from NASA is simply taken to assess wind energy potential of the selected site (resource assessment). This data can AIMS Energy Volume 5, Issue 1, 96-112. be extrapolated to the designated wind turbine height of 30 m. Tables 2 summarize the monthly wind
